SAI TEJA SRI SANJANA THUMMALAPALLI

San Jose, CA | 408-390-7650 | saitejasrisanjana.thummalapalli@sjsu.edu

PROFESSIONAL SUMMARY

San José State University graduate student with hands-on experience configuring technical systems, diagnosing software and data issues, documenting processes, and developing user-facing applications. Experienced with Windows-based development tools, Python, FastAPI, Streamlit, Git, and cloud technologies. Demonstrated ability to test complex systems, identify root causes, maintain organized technical records, and explain technical results clearly. Seeking to contribute these troubleshooting, documentation, and customer-support skills to SJSU IT's Instructional & Meeting Spaces team.

EDUCATION

San José State University, San Jose, CA, M.S., Applied Data Intelligence | Expected December 2027

Anurag University, Hyderabad, India, B.Tech., Artificial Intelligence and Machine Learning | July 2025

TECHNICAL SKILLS

Technical Support: System testing, first-level diagnostics, issue identification, troubleshooting, user guidance, technical documentation
Systems and Tools: Git, Jupyter, FastAPI, Streamlit, TensorBoard, Power BI, Tableau, Plotly
Programming and Data: Python, SQL, MySQL
Cloud and Platforms: AWS, Snowflake, Apache Airflow, dbt
Documentation: Operational workflows, experiment logs, setup instructions, test results, GitHub README documentation
Additional Technologies: Hugging Face Transformers, LangGraph, PyTorch, NVIDIA NIM, Whisper, Wav2Vec2.0

EXPERIENCE

ML & Research Intern, University of Hyderabad, India | February 2025 - June 2025

- Cleaned, standardized, and verified more than three large speech datasets, achieving complete audio and transcript coverage for reliable system evaluation. Diagnosed data-quality and model-performance issues across multiple datasets, dialects, and noise conditions.
- Evaluated more than four speech-recognition systems using standardized performance measures and identified error patterns that contributed to an accuracy improvement of over 80% after fine-tuning. Designed seven structured test scenarios to assess system reliability under real-world operating conditions.
- Implemented repeatable testing workflows using Python and PyTorch-based transformer models. Maintained organized experiment records and documented procedures, results, and technical findings for reproducibility. Communicated evaluation results and system limitations in a clear, structured format to support model selection.

RELEVANT PROJECTS

InternFlow - Autonomous Resume Tailor LangGraph, FastAPI, Streamlit, NVIDIA NIM | March 2026

- Built a user-facing application that accepts job information, analyzes requirements, and generates tailored resume recommendations in under two minutes. Developed a FastAPI backend and Streamlit interface, integrating GitHub REST API data and live internship information.
- Tested and troubleshot interactions across the interface, backend, external APIs, and AI models. Designed a dual-model system that improved project-classification speed by six times. Organized system functions into a structured workflow, making errors easier to identify and resolve.

ContractSense AI LangGraph, NVIDIA NIM, Streamlit | April 2026

- Collaborated on a hackathon project that allowed users to upload PDF and DOCX files and receive structured contract-risk reports. Created an end-to-end document-processing workflow involving file uploads, parsing, automated analysis, and PDF report generation.
- Developed a five-stage system that extracted information, classified risks, generated explanations, proposed revisions, and produced reports. Designed plain-language explanations to make complex technical output understandable to users.
- Tested document-processing behavior and resolved issues involving file parsing, structured output, and report generation.

CatRL - Reinforcement Learning Agent Python, FastAPI, HTML, JavaScript, TensorBoard | April 2026

- Developed and tested an interactive web application for real-time visualization of an AI agent. Built adjustable interface controls that allowed users to modify system behavior and observe results.
- Conducted controlled testing across three configurations and documented behavioral differences using charts and heatmaps. Used TensorBoard logs and visualizations to diagnose system performance.

TECHNICAL DOCUMENTATION AND CONTRIBUTIONS

- Maintain documented AI and data projects on GitHub, including setup information, reusable code, experiment logs, and deployment demonstrations.
- Create structured technical workflows and test results that allow projects to be reproduced and evaluated.
- Published user-facing demonstrations for speech recognition, reinforcement learning, document analysis, and data analytics applications.
- Experienced in translating technical processes and results into understandable written explanations.
